BOOK SYNOPSIS

Respiratory motion causes an important uncertainty in radiotherapy planning of the thorax and upper abdomen. The main objective of radiation therapy is to eradicate or shrink tumor cells without damaging the surrounding tissue by delivering a high radiation dose to the tumor region and a dose as low as possible to healthy organ tissues. Meeting this demand remains a challenge especially in case of lung tumors due to breathing-induced tumor and organ motion where motion amplitudes can measure up to several centimeters. Therefore, modeling of respiratory motion has become increasingly important in radiation therapy. With 4D imaging techniques spatiotemporal image sequences can be acquired to investigate dynamic processes in the patient's body. Furthermore, image registration enables the estimation of the breathing-induced motion and the description of the temporal change in position and shape of the structures of interest by establishing the correspondence between images acquired at different phases of the breathing cycle. In radiation therapy these motion estimations are used to define accurate treatment margins, e.g. to calculate dose distributions and to develop prediction models for gated or robotic radiotherapy. In this book, the increasing role of image registration and motion estimation algorithms for the interpretation of complex 4D medical image sequences is illustrated. Different 4D CT image acquisition techniques and conceptually different motion estimation algorithms are presented. The clinical relevance is demonstrated by means of example applications which are related to the radiation therapy of thoracic and abdominal tumors. The state of the art and perspectives are shown by an insight into the current field of research. The book is addressed to biomedical engineers, medical physicists, researchers and physicians working in the fields of medical image analysis, radiology and radiation therapy.

4D MODELING AND ESTIMATION OF RESPIRATORY MOTION FOR RADIATION THERAPY BIOLOGICAL AND MEDICAL PHYSICS BIOMEDICAL ENGINEERING

- Are you looking for Ebook 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering ? You will be glad to know that right now 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering is available on our online library. With our online resources, you can find Applied Numerical Methods With Matlab Solution Manual 3rd Edition or just about any type of ebooks, for any type of product.

Best of all, they are entirely free to find, use and download, so there is no cost or stress at all. 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering may not make exciting reading, but Applied Numerical Methods With Matlab Solution Manual 3rd Edition is packed with valuable instructions, information and warnings. We also have many ebooks and user guide is also related with 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering and many other ebooks.

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering . To get started finding 4D Modeling And Estimation Of Respiratory Motion For Radiation Therapy Biological And Medical Physics Biomedical Engineering , you are right to find our website which has a comprehensive collection of manuals listed.
